

First get into a group. Now, here are some tasks you need to do with the Happiness survey dataset:

1. tidy and wrangle as needed
2. visualise - there are lots of variables to visualise
3. model - there are several factors and multiple DVs you could look at
4. as you go, email me your script chunks as you complete them

Each time you complete a sub-task task in your group, email me your R code, and move onto another task.

Feel free to stop for a snack, lunch whenever you want - you can eat in this room if needs be.

Towards the end of the day (at around 1515) I will knit a markdown file as an .html file that presents the classes work today. Give you're doing this in .html it would be nice to see an animation or two!

- All activity will be co-ordinated via this site:

https://hackmd.io/_2008xkVSiGtELYQXoEqHg

- Get into your groups.
- Load the Happiness data file into R.
- Work as a group from now until 1500 - at 1515 I'll knit all your code together.
- Each time you complete a sub-task - email me your R script.
