

# For the assignment

- You need to do a Hackathon individually on a new dataset (i.e., not the one you're looking at as a group today).
- The dataset could be an open dataset from an area you research (or are interested in) - perhaps it was published with a paper.
- Or you could use an open dataset on any topic that interests you.
- Whatever set you choose, I want to see evidence of data wrangling and tidying, visualisation, and modelling - with a summary of what meaning you have extracted from the data (and any caveats about the interpretation that you think are worth raising).

# Good places to start looking for open data sets

- In your research area, there are likely to be large datasets that have already been published - or you could...

- Check out the Google dataset search toolbox:

<https://toolbox.google.com/datasetsearch>

- Or the gapminder datasets:

<https://www.gapminder.org/data/>

- Or the Kaggle datasets:

<https://www.kaggle.com/datasets>

- Or from any other source you might want to use! The data don't have to be psychological in nature.
