

One thing I learned recently...

You can read in datafiles directly to R using the hyperlink - for example:

```
data <- read.csv("https://raw.githubusercontent.com/  
ajstewartlang/Advanced-Stats-R-Course/master/Lecture%204/  
dataset1.csv")
```

- We're going to have our first look at the Analysis of Variance (ANOVA).
- This week we'll look at ANOVA for within-subjects, between-subjects and mixed designs.
- ANOVA is an important statistical test and (in various forms) is used widely across many areas of psychology.
- It assumes that our data are parametric.
