

# Style Guide

Place spaces around operators like `+` , `-` , `=` , `<-`

Whitespace used sensibly makes your code easier to read. Separate discrete sections of code in your script with a blank line.

When writing scripts, continue on a subsequent line rather than writing one very long line.

Comment, comment, comment...

```
# First we load our datafile.
```

Once your script is finished, don't forget to save it...
