

- Loops involve repeating a command or a set of commands surrounded by `{ }` a certain number of times - popular with kids in the 1980s...
- Printing something `i` times:

```
> for (i in 1:10) {
>   print("Hello world")
> }
```

[illegible]

- Our variable `i` increments one by one from the start of the sequence `1:10` to the end.
- We can also use `i` in our code embedded within the loop:

```
> for (i in 1:10) {  
>   print(i)  
> }  
[1] 1  
[1] 2  
[1] 3  
[1] 4  
[1] 5  
[1] 6  
[1] 7  
[1] 8  
[1] 9  
[1] 10
```
