Today

- In groups you are going to work on hacking a large dataset - the World Happiness Report Data. I want you to tidy and wrangle as necessary, visualise components, run appropriate statistical tests, and the put all this in a markdown document (rendered as a .html file)

- In your group, decide what activities you're going to do with the dataset.

Why?

- Real world data is messy - I want you to experience making sense of that.

- Real world research involves collaborating with others - again, this is good practice for managing that.

- One of the best ways to learn new coding/data/staistical tricks/techniques is to see how others do things!

- The Hackathon! assignment (which you will each do individually) will be much easier once you've gone through an actual Hackathon.
